Jordan University of Science and Technology, Jordan  
Medical student, Dr. Abdelhakeem Okour

This is a cross sectional study that aimed mainly at assessing the health status of Al-Sareeh population in north of Jordan. That study was designed by the department of public health to highlight the theme learning by practicing as the best way of education. I was directly involved in the development of the survey instrument, which was a questionnaire with close ended questions, stressed health status assessment. I visited and interviewed the household members. Later on, I entered and analyzed the data using SPSS program, built up case studies, developed a mini-research project, and implemented health education sessions to target groups of people.

The results were published in a book which was given a name: Health profiles of a suburban community in north Jordan  
Al-Sareeh A community-based study.
